BRUSHES
High-speed machines

Important user information
Brushes for high-speed machines

To be noted when selecting brushes and using high-speed machines:

1. General user information
Thanks to their reinforced components and especially rigid clamping characteristics, the brushes on the following pages are suitable for common brands of high-speed equipment (e.g. straight grinders, pneumatic tools).

2. Typical brushes for high-speed machines

Please note:
End brushes spread during operation.

Wheel brushes
Available with knotted and crimped wire.

End brushes
Available with knotted and crimped wire, as well as extra-long shaft and special shapes.

The machine information on the packaging and displays
Details on machine suitability can also be found on the machine icons found on Osborn packaging and counter and shelf displays.
