Manufacturer Disclaimer	Metal Dusts from the buffing of brass, zinc and especially magnesium or aluminum
	along with buffing cloth fibers and compound residues may cause fires or explosions
	when exposed to a strong ignition source. These fires typically are started in the vent
	pipes, collector bags or receptacles used in waste gathering from the buffing
	ventilation system. Make sure that the collectors are changed frequently and the

waste kept in a cool, dry environment that is free from sparks or other strong ignition sources. The collection devices should be grounded to minimize static charges.Dust collection receptacles should be designed by engineers who are familiar with the potential hazard of a flammable or explosive dust. If such a fire occurs, fight the fire with a Class D fire extinguisher. Do not use water or a halogenated extinguishing media.
