16. OTHER INFORMATION

Revision Number	BA899-4	
Supersedes Date	1/1/2014	
HMIS Rating	1-1-0-0	
Manufacturer Disclaimer	Metal Dusts from the buffing of brass, zinc and especially magnesium or aluminum	
	along with buffing cloth fibers and compound residues may cause fires or explosions	
	when exposed to a strong ignition source. These fires typically are started in the vent	
	pipes, collector bags or receptacles used in waste gathering from the buffing	
	ventilation system. Make sure that the collectors are changed frequently and the	
	waste kept in a cool, dry environment that is free from sparks or other strong ignition	
	sources. The collection devices should be grounded to minimize static charges.Dust	
	collection receptacles should be designed by engineers who are familiar with the	

potential hazard of a flammable or explosive dust. If such a fire occurs, fight the fire with a Class D fire extinguisher. Do not use water or a halogenated extinguishing media.
