

Press Information

Overview New Products from Osborn presented at hardware fair Cologne

Osborn LONGLIFE Cup Brush

The newly developed "LONGLIFE" steel wire unites the features of crimped and knotted wire. Brushes with this new trim material have a significantly higher service life than comparable brushes with conventional steel wire and by this also clearly minimize the risk of wire breakage. The brush is best at descaling jobs and the result is a fine, satinized surface finish. Just like 700 other products from the Osborn-assortment, the brush is certified by the German safety association TÜV-Süd.

Osborn Weedbrush

Brush with v-shaped wire-configuration. Used for removal of moss and weeds on pavements and cobbled zones. The brush body is made of wood and is available with and without bore for placing a handle. The filament is steel wire, available in dia 0.30 and 0.35 mm.

Osborn Band Saw Brush

To remove chips on the band saw or circular saw blades in order to protect the teeth. This increases the service life of the saw blade and optimizes cutting accuracy. Brushes with wire trim are used to clean off aluminum and metal residue meanwhile brushes with nylon trim will take off chips of plastic or wood

Osborn Bevelbrushes

The assortment of Osborn bevelbrushes was enlarged. Now also dia 115 and 125 mm are available. In addition there is brass-coated trim material available for

bevelbrushes with dia 100 mm. Bevelbrushes are particularly suitable for processing inaccessible areas such as angles, edges or corners. The brushes are certified by the German safety-association TÜV-Süd.
