FOR IMMEDIATE RELEASE:

Osborn Introduces the JacksonLea® Brand, LeaSpray HP™ Spray Gun

A high-pressure spray gun engineered for increased productivity, less maintenance, versatility and more.

RICHMOND, Ind. – June 2017 – [Osborn](#), the world's leading supplier of industrial brushes, polishing compounds, buffs, non-wovens and flapwheels, introduced the JacksonLea® brand, LeaSpray HP™ spray gun for use with all JacksonLea polishing compounds.

Engineered for industrial liquid buffing compounds, the LeaSpray HP spray gun is similar to other powder coating and painting guns, but it has a versatile design that fits all types of control systems and applications, including hand, automatic and robotic applications. The LeaSpray HP also features efficient compound usage with high pressure that penetrates the turbulence of the spinning buff.

Designed to focus and deliver the compound exactly where it needs to be applied, the LeaSpray HP minimizes waste and offers a finish consistency that increases productivity and requires less rework and scrap. The LeaSpray HP is constructed for long wear life and requires less maintenance and downtime than similar products.

“As leaders and experts in the manufacturing of buffs and compounds, it made sense for us to incorporate the LeaSpray HP spray gun into Osborn’s company goal of being a provider of surface treatment solutions from start to finish,” said Tim Priestley, product manager, polishing at Osborn. “The LeaSpray HP gives customers a high quality product for a competitive price that will reduce costs, increase productivity and revolutionize the way they make their products shine.”
